## DETAILED ACTION

### *Claim Objections*

1. Claims 2 and 3 are objected to because of the following informalities: "the object" in line 3 of claim 2 lacks antecedent basis. Appropriate correction is required.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 1-4 and 11-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uhl 5751417 in view of Stafford 5504575.

These claims stand rejected as discussed previously. Note that, as discussed in the office action dated 9/25/02, Stafford shows dispersed light to be incident upon a detector, and it would have been obvious to the ordinarily skilled artisan at the time of invention to use this arrangement of Stafford with Uhl's

Art Unit: 2872

device in order to allow wavelength selection and detection of separate and distinct wavelengths in the detection beam path.

***Response to Arguments***

4. Applicant's arguments filed 12/4/03 have been fully considered but they are not persuasive.

Applicant has argued that Uhl does not show dispersed light to be incident upon the detector as required by the amended claims. However, this feature was addressed in the office action dated 9/25/02. Dispersed light incident upon a detector is a common arrangement and an example is shown by the secondary reference to Stafford. Stafford's arrangement allows for particular wavelengths to be selectively directed to the detector, thus allowing for discreet wavelength analysis of an incoming beam. This arrangement could be advantageously utilized with Uhl's device to allow specific wavelengths in the light emitted from the sample to be selectively detected and analyzed. Accordingly, the presently claimed combinations do not patentably distinguish the present invention over the prior art.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stern shows an arrangement with dispersed light incident upon a detector.

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
